

AYLESHAM PRIMARY SCHOOL

Project Facts

Sector: Education

Our Role: Sub Contractor

Location: Canterbury

Client: Portakabin

Project Value: £1m

Duration: 12 months

Overview:

Here Natta provided a drainage service to design, supply and install the onsite foundations and associated external works to the new Primary school in Aylesham.

Scope of Works:

Our scope was to provide a full turnkey groundworks package for our client. This involved the initial site establishment including boundary, hoardings, haul road and hard standings. We then designed and installed the foundations and drainage. Part of the scope was a steel framed sports hall which we constructed in its entirety.

Extensive ground modelling was undertaken to keep arisings on site and were re-levelled the adjacent sports pitches. The programme was in two distinct phases to construct the new school on the existing playing fields, whilst the existing school remained open.

Once the new school was occupied, the school was partially demolished and reworked to provide external landscaped facilities.
