

Deepcut – Green Swathe

SECTOR:

Infrastructure & 278 Works

OUR ROLE:

Main Contractor

LOCATION:

Deepcut, Camberley

CLIENT:

Skanska

PROJECT VALUE:

£1m

OVERVIEW:

Natta was awarded a further works package with Skanska to construct a Green Swathe at the Deepcut Barracks.

SCOPE OF WORKS:

This project involved the creation of a public open space incorporating paths, pedestrian bridges, open watercourses and soft landscaping.

Prior to works starting, the land had to be remediated due to historic contamination. Because of this, a clear methodology had to be adhered to so a defined, clean soil layer can be maintained.

As well as this, existing shallow high voltage cables had to be protected both during construction and after completion.

With limited access to the site and adjacent housing development, this project required careful planning and coordination as to not cause disruption. Our local presence allowed us to coordinate deliveries of imported soils whilst minimising disturbance.
