

Millbrook Park

SECTOR:

Infrastructure

OUR ROLE:

Main Contractor

LOCATION:

Barnet

CLIENT:

Inglis Consortium

PROJECT VALUE:

£25m

DURATION:

Nov '12 - 2022

OVERVIEW:

Early development Installation of a primary link road to enable the re-development of a MoD barracks into a large scale residential development.

SCOPE OF WORKS:

The project had extensive section 278 work requirements along with interface management of the various stakeholders and contractors including the council, UKPN, SSE, Thames Water and other contractors and developers.

All of the section 38 and 278 roads and associated drainage were built to adoptable standards with Natta ensuring that all construction activities were approved and signed off. The design and build project also required Natta to undertake demolition works along with extensive cut and fill earthworks and associated piled retaining walls.

Extensive earthworks profiling was required across the development, including 45,000m³ of earthworks cut and fill and considerable remediation requirements to avoid disposal off site.

We were subsequently awarded contracts for public parks, gabion wall feature areas and further distributor roads with associated drainage.
