

Vitesse House, Ashford

SECTOR:

Building, Groundworks

OUR ROLE:

Main Contractor

LOCATION:

Ashford, Middlessex

CLIENT:

AJ Dowsett

PROJECT VALUE:

£1.1m

OVERVIEW:

Natta has secured a new contract, working as the main contractor for AJ Dowsett. The project comprises the construction of a new warehouse facility located in Ashford, supporting the client's ongoing expansion and operational needs.

SCOPE OF WORKS:

As part of our work, Natta is responsible for delivering the full construction works package, including all associated groundworks. Our comprehensive scope of works covers every key stage of the build, ensuring a coordinated and efficient delivery from the ground up.

Full site preparation and groundworks were carried out, followed by the construction of the large foundations to support the warehouse structure. Natta undertook the design and installation of the steel frame, along with the fitting of external cladding and windows to complete the building envelope.

Both ground floor and mezzanine-level concrete slabs were formed to provide durable and functional internal surfaces. In addition, we completed the full drainage installation and coordinated the delivery of all underground services to support the facility's operational needs.

Externally, a full paved car park was constructed, along with all necessary external finishes to complete the development to a high standard.

This project demonstrates Natta's capability in delivering industrial and commercial facilities to a high standard, within a fully integrated design and build model.

See next page for more

"This project is a great example of our ability to deliver high-quality industrial facilities efficiently and safely. Our team took the build from groundworks right through to final finishes, ensuring the client has a fully operational warehouse ready to support their growth."

Andrew Scott
