

Horizon 120 Business Park

SECTOR:

Infrastructure, Drainage

OUR ROLE:

Main Contractor

LOCATION:

Braintree, Essex

CLIENT:

The Marshgate Group

PROJECT VALUE:

£1.6m

DURATION:

22 weeks

OVERVIEW:

Natta were appointed to provide essential infrastructure works to unlock future phases of development across the Horizon 120 Business Park. We worked for The Marshgate Group in partnership with Braintree District Council.

SCOPE OF WORKS:

Natta's scope of work focused on the design and construction of a new access road, incorporating surface water drainage, swales, headwalls, bellmouths, footpaths, street lighting and landscaping, together with the installation of a foul pumping station.

Along Edison Way, the scheme delivered foul water drainage through the existing roadway, as well as service trenches for water, electricity and telecoms, with additional corridors extended to the southern boundary to ensure capacity for future growth.

On Horizon Boulevard, a new trench was created through existing paving and carriageways to accommodate a high-voltage cable route to the primary substation. This was coordinated alongside the installation and connection of water, gas, HV, LV and Openreach services through the access road.

Collectively, these works established the fundamental utilities and transport links needed to support the continued expansion of Horizon 120 as a prime commercial destination.
