

Daedalus Electric and Enabling Works

SECTOR:

Infrastructure, Drainage Works, Electrical Works

OUR ROLE:

Main Contractor

LOCATION:

Hampshire

CLIENT:

Gardiner & Theobald

PROJECT VALUE:

£3.5m

DURATION:

Ongoing

OVERVIEW:

Natta has been appointed to deliver two contracts at Daedalus, the enabling and the electrical works for future development phases for Gardiner & Theobald. The project forms an important part of the ongoing regeneration of the waterfront site, providing the essential infrastructure required to facilitate future construction and ensure subsequent phases can progress efficiently.

SCOPE OF WORKS:

The scope of work includes the construction of new bellmouth junctions, providing safe and efficient access into the future development parcels. The works are being carefully coordinated to integrate with the existing highway network, while supporting the phased delivery of the wider development.

In addition, the project involves the installation of a new electrical feed and drainage connections, providing the essential utility infrastructure required to service future phases of the site. The works require careful planning and coordination to ensure all infrastructure is delivered in accordance with the programme and relevant technical standards.

Overall, the project demonstrates Natta's capability in delivering enabling infrastructure works that support the successful progression of large-scale regeneration projects.
